EDUCATION

PhD in Mechanical Engineering
Virginia Tech, Blacksburg, VA

May 2025 (Expected)
GPA: 3.95/4.0

Bachelors of Technology in Mechanical Engineering
Indian Institute of Technology, Jodhpur, India

May 2021
GPA: 8.33/10

RESEARCH EXPERIENCE

Graduate Student Researcher

August 2021 - Present

Institute: Virginia Tech

Advisor: Prof. Dylan Losey

- Formalized a method to learn latent mappings for complex robot actions without using human demonstrations.
- Unified learning from Demonstrations, Corrections and Preferences under a flexible reward learning framework.
- Developed a framework for assisted grasping using a novel rigid-soft gripper based on a soft switchable adhesive.
- Formulated conditions for convergence of a real time learning rule based on Lyapunov stability analysis.
- Developed an offline learning algorithm to modify the system dynamics and increase robustness for suboptimal inputs.

Undergraduate Student Researcher

July 2019 - May 2021

Institute: Indian Institute of Technology(IIT), Jodhpur

Advisor: Prof. Suril Shah

- Implemented the Basic Visual Servoing algorithm on a Universal Robots UR-5 Manipulator.
- Developed a novel approach for visual servoing based on student t-distribution mixture model (SMM).
- Extracted feature points from an uncooperative tumbling object to create an elliptical track in the image plane.
- Designed a controller to perform Visual Servoing for tumbling objects using an extracted elliptical track.
- Worked on vision based control and motion planning of a half humanoid robot.

INTERNSHIP EXPERIENCE

STUDENT ASSOCIATE, HONDA RESEARCH INSTITUTE (HRI-US)

January 2024 - May 2024

San Jose, California, USA

A HIERARCHICAL FRAMEWORK FOR SOLVING LONG HORIZON DEXTEROUS MANIPULATION TASKS

- Explored and implemented state-of-the-art algorithms to determine best approaches to solve for different subtasks of long horizon dexterous manipulation task using multi-fingered robot hand.

- Proposed a novel teacher-student reinforcement learning approach combining real world data to enable efficient sim-2-real transfer.
- Developed a hierarchical framework combining different methods — imitation learning, reinforcement learning and model based control — to solve for different parts of a long horizon task.

MECHATRONICS, INSTRUMENTATION AND CONTROL LAB (MICL), IIT PATNA May 2019 - July 2019

Indian Institute of Technology (IIT), Patna, India

LAPAROSCOPIC SIMULATOR WITH 3 DoF HAPTIC FEEDBACK

- Aimed at the development of a novel kinesthetic haptic device for laparoscopic simulation.
- Worked on user interaction with virtual organs instead of cadavers for realistic experience, for training and improving the skills in surgical process of laparoscopy.
- Achieved force feedback in x and y direction using a cable driven parallel mechanism and in z direction using a ferrofluid based damper and a capstan drive mechanism.

AUTOMATION + MECHANICAL ENGINEERING INTERN, GODREJ INTERIO

May 2018 - July 2018

Company: Godrej Interio, Mumbai, India

DESIGN AND DEVELOPMENT OF A RAIL GUIDED VEHICLE (RGV)

- Designed and prototyped an automated vehicle for inter plant material transfer to reduce risk of human lives and to improve efficiency.
- Integrated LIDAR sensor for working in an open environment to avoid the obstacles in its path for the purpose of avoiding hazards. [Link to Model on Grabcad](#)

SELECTED PROJECTS

INTEGRATING PREFERENCES WITH ADVERSERIAL INVERSE REINFORCEMENT LEARNING

JAN 2022 - MAY 2022

Institute: Virginia Tech

- Analyzed the existing loss functions for imitation learning that leverage different sources of feedback — crossentropy loss for preferences and causal entropy for reward learning.
- Integrated the loss functions for reward learning and preferences under a unified framework.
- Evaluated our proposed approach of combining different feedback forms against state-of-the-art methods that learn from demonstrations and preferences.

VISION BASED CONTROL AND MOTION PLANNING OF A HALF HUMANOID ROBOT

MARCH 2021 - MAY 2021

Indian Space Research Organisation (ISRO) Respond Project

- Set up and controlled the custom half humanoid developed by ISRO using ROS and MoveIt.
- Extracted pose from vision data in 3D Cartesian space to implement motion planning with and without obstacles.
- Implemented eye to hand Image Based Visual Servoing in Joint Space for the custom robot.

IMAGE BASED VISUAL SERVOING FOR TUMBLING OBJECTS

JUNE 2020 - FEB 2021

Institute: Indian Institute of Technology(IIT), Jodhpur, India

- Extracted feature points from an uncooperative tumbling object to create an elliptical track in the image plane. The controller minimizes the error between the current elliptical track and the desired features.
- This algorithm was successfully implemented on a 6 DoF UR-5 robot.
- Focused on grasping of tumbling objects and implementation of the algorithm on a dual arm system for On-Orbit Service.

VISION BASED CONTROL OF UR-5 MANIPULATOR

JAN 2019 - APRIL 2019

Institute: Indian Institute of Technology(IIT), Jodhpur, India

- Studied the Basic Visual Servoing algorithm and operation of UR-5 Robotic Manipulator.
- Successfully controlled the position, velocity and acceleration of 6 Degree of Freedom UR-5 manipulator using ROS.
- Multiple feature detection and tracking was achieved with the implementation of visual servoing algorithm.

TECHNOLOGY SUMMARY

- **Software:** Robot Operating System (ROS), MATLAB, Pytorch, OpenCV, PyBullet, Arduino IDE, Fusion 360, COMSOL Multiphysics, SolidWorks, Unity 3D, ADAMS.
- **Landuages:** Python, C/C++.
- **Interests:** Learning from Demonstrations, Imitation Learning, Human-Robot Interaction, Robot Learning, Reinforcement Learning, Vision Based Control, Soft Robotic Grippers.
- **Robots:** FrankaEmika Panda, Universal Robots UR10, UR5, Fetch, Kinova Gen-3 Lite.
