EDUCATION

PhD in Robotics

Virginia Tech, Blacksburg, VA

December 2025 (Expected)

GPA: 3.95/4.0

Master of Science in Robotics

Virginia Tech, Blacksburg, VA

December 2024

GPA: 3.95/4.0

Bachelors of Technology in Mechanical Engineering

Indian Institute of Technology, Jodhpur, India

May 2021

GPA: 8.33/10

WORK EXPERIENCE

Graduate Research Assistant

Virginia Tech, Blacksburg, Virginia, USA

August 2021 - Present

- Formalized a method to learn latent mappings for complex robot actions without using human demonstrations.
- Unified learning from Demonstrations, Corrections and Preferences under a flexible reward learning framework.
- Developed a framework for assisted grasping using a novel rigid-soft gripper based on a soft switchable adhesive.
- Developed an offline learning algorithm to modify the learning dynamics and increase robustness for suboptimal inputs.
- Proposed a waypoint-based reinforcement learning algorithm for efficient learning of robot manipulation tasks.
- Formulated a novel behavior cloning algorithm to ensure local stability of learned policy to mitigate covariate shift.

Student Associate (Research Internship)

Honda Research Institute (HRI-US), San Jose, California, USA

January 2024 - May 2024

- Explored and implemented state-of-the-art algorithms for dexterous manipulation of multi-fingered grippers.
- Determined the best approaches to solve for different subtasks of long horizon dexterous manipulation task.
- Proposed a novel teacher-student reinforcement learning approach combining real world data.
- Developed a hierarchical framework combining imitation learning, reinforcement learning and model based control.
- Achieved successful sim-2-real transfer for long-horizon dexterous manipulation task on multi-fingered robot hands.

Undergraduate Student Researcher

Indian Institute of Technology (IIT) Jodhpur, India

July 2019 - May 2021

- Implemented the Basic Visual Servoing algorithm on a Universal Robots UR-5 Manipulator.
- Developed a novel approach for visual servoing based on student t-distribution mixture model (SMM).
- Extracted feature points from an uncooperative tumbling object to create an elliptical track in the image plane.
- Designed a controller to perform Visual Servoing for tumbling objects using an extracted elliptical track.
- Worked on vision based control and motion planning of a half humanoid robot.

Research Internship

Mechatronics, Instrumentation and Control Lab (MICL), IIT Patna, India

May 2019 - July 2019

- Aimed at the development of a novel kinesthetic haptic device for laparoscopic simulation.
- Worked on user interaction with virtual organs instead of cadavers for realistic experience for surgical training.
- Achieved force feedback in x and y direction using a cable driven parallel mechanism.
- Integrated a ferrofluid based damper and a capstan drive mechanism to achieve force feedback in z direction.

Automation + Mechanical Engineering Intern

Godrej Interio, Mumbai, India

May 2018 - June 2018

- Designed and prototyped an automated rail guided vehicle for inter plant material transfer to reduce risk of human lives and to improve efficiency.
- Integrated LIDAR sensor for working in an open environment to avoid the obstacles in its path for the purpose of avoiding hazards. [Link to Model on Grabcad](#)

SELECTED PROJECTS

Integrating Preferences with Adversarial Inverse Reinforcement Learning

Jan 2022 - May 2022

Virginia Tech, Blacksburg, Virginia, USA

- Analyzed the existing loss functions for imitation learning that leverage different sources of feedback — crossentropy loss for preferences and causal entropy for reward learning.
- Integrated the loss functions for reward learning and preferences under a unified framework.
- Evaluated our proposed approach of combining different feedback forms against state-of-the-art methods that learn from demonstrations and preferences.

Vision Based Control and Motion Planning of a Half Humanoid Robot

March 2021 - May 2021

Indian Space Research Organisation (ISRO) Respond Project

- Set up and controlled the custom half humanoid developed by ISRO using ROS and MoveIt.
- Extracted pose from vision data in 3D Cartesian space to implement motion planning with and without obstacles.
- Implemented eye to hand Image Based Visual Servoing in Joint Space for the custom robot.

Image Based Visual Servoing for Tumbling Objects

JUNE 2020 - FEB 2021

Indian Institute of Technology(IIT), Jodhpur, India

- Extracted feature points from an uncooperative tumbling object to create an elliptical track in the image plane. The controller minimizes the error between the current elliptical track and the desired features.
- This algorithm was successfully implemented on a 6 DoF UR-5 robot.
- Focused on grasping of tumbling objects and implementation of the algorithm on a dual arm system for On-Orbit Service.

TECHNOLOGY SUMMARY

- **Languages:** Python, C/C++.
- **Developer Tools:** VS Code, MATLAB, Arduino
- **Technologies/Frameworks:** Linux, GitHub, Robot Operating System (ROS), Pytorch, OpenCV, Nvidia Isaac Gym, PyBullet, Fusion 360, SolidWorks.
- **Robots:** FrankaEmika Panda, Universal Robots UR10, UR5, Fetch, Kinova Gen-3 Lite.
- **Interests:** Imitation Learning, Human-Robot Interaction, Robot Learning, Reinforcement Learning, Foundational Models, Vision Based Control, Soft Robotic Grippers, Embodied Agents.
